

From workshop to boardroom, keep the logic intact.

A focused consulting engagement that turns AI ambition into a model, a governed target, and a decision-ready case.

01	02	03	04	05
Frame the decision	Map Live	Design the target	Build the case	Run the decision
Agree the client objective, scope, exclusions, decision owner, and evidence standard.	Establish the current organisation, Work catalog, capability state, costs, and ownership.	Clone a scenario and change Work, organisation, capability strength, and AI deployments.	Record investment, value lanes, assumptions, evidence, risks, controls, and recommendation.	Present a client-safe report, resolve readiness findings, and agree the next action.

Bring enough truth	Leave with a decision artifact	Commercial boundary
• Organisation and role data • Priority workflows and pain points • Candidate AI solutions and constraints • Available cost, service, and delivery evidence • Named decision owner and accountable operators	• Validated current-state operating model • Work and capability assessment • Governed AI solution and deployment design • Target scenario with structural and cost movement • Evidence-backed Transformation Case and client-safe report • Clear pilot, scale, pause, or reject recommendation	Consultant-owned advisory and delivery. Orgonaut supplies the connected model. Separate client tenants; no guaranteed ROI and no autonomous restructuring.

[See the sample case → orgonaut.co/resources/sample-transformation-case](https://orgonaut.co/resources/sample-transformation-case)

Fictional framework. Scope, timetable, and fees are agreed by the consultant and client.
